- Please contact him with any questions.

### Background:

The Student Research Symposia (SRS) model was developed by NASA GLOBE as a way to welcome students into science research. SRS events bring students together to present the results of their research and investigations to other aspiring scientists and STEM professionals. At the symposia, students share research, sharpen science communication skills, and develop their identities as scientists and engineers.

The SRS is modeled on professional science conferences. SRS projects are reviewed both by student peers and scientists. At the SRS the emphasis is not “winning” or competition but collaboration and communication of student research to help foster community connections between participants.
